Overarching NPHA Advocacy and Policy Goals

The Nevada Public Health Association (NPHA) organizes its advocacy and policy activities around five overarching goals:

- Promoting Social Justice and Health Equity in Nevada
- Ensuring the Right to Health and Health Care in Nevada
- Building Public Health Infrastructure and Capacity in Nevada
- Promoting Improved Data Collection to Inform Policymaking in Nevada
- Advocating for Health in All Policies

These advocacy and policy goals are consistent with NPHA’s vision of a healthy Nevada and its mission of serving as the voice for public health in Nevada in order to improve health and achieve equity in health status and a healthier Nevada.

2016 NPHA Advocacy Agenda

In keeping with NPHA’s strategic vision, the NPHA Board of Directors established its Advocacy and Policy Committee (APC). During 2016 and consistent with NPHA’s overarching advocacy and policy goals, the NPHA APC will focus its advocacy and policy efforts on the following six priority areas:

1. Advocating for Tobacco and E-cigarette Prevention and Control Policy
2. Promoting Healthy Lifestyles through the Support of Nutritious Eating and Active Living
3. Protecting and Promoting Maternal, Child, and Adolescent Health
4. Improving Access to Clinical and Preventive Health Services in Nevada
5. Supporting Evidence-based Injury and Violence Prevention in Nevada
6. Advocating for Local, State, and Federal Investments in Public Health and Other Social Determinants of Health in Nevada
A key element of work in each of these six priority areas is the development of resources for NPHA members and other public health professionals to educate and inform policy makers, businesses, the media, communities, and the public on the public health system and the ten essential public health services. Pursuing this advocacy agenda will also require our ongoing collaboration with organizations and agencies who share our vision of a healthy Nevada.

An important addition to NPHA advocacy efforts is an emphasis on health in all policies and an associated focus on health impact assessments of current and proposed public policy, planning, and programs. NPHA also supports efforts to improve health-related data collection and analysis used to inform science-based public planning and policy.

Finally, NPHA has the flexibility to act, when appropriate, on other pressing public health issues – such as, the public health and safety regulation of medical and recreational marijuana – that may not easily be categorized under the five overarching NPHA goals and our 2016 advocacy agenda and current policy priorities.

**NPHA Advocacy and Policy Priorities in 2016**

**A. Advocating for Tobacco and E-cigarette Prevention and Control Policy in Nevada**

Promote and establish sustainable funding for comprehensive state and local tobacco prevention and cessation programs at funding levels that meet or exceed Centers for Disease Control and Prevention (CDC) recommendations, including full funding for tobacco prevention and cessation programs from the tobacco Master Settlement Agreement (MSA) and tobacco tax revenues.

Protect and strengthen the Nevada Clean Indoor Air Act (NCIAA) and other efforts to implement and enforce comprehensive tobacco-free and smoke-free laws at the state and local levels, including smoke-free casinos, taverns, and multi-unit housing.

Support evidence-based practices and policy that reduce the consumption of tobacco products, such as tobacco pricing and strategies leading to reducing tobacco consumption.

Support the evidence-based regulation and control of e-cigarettes and other emerging tobacco products.

Support the development and implementation of tobacco-free policies in public places and on all campuses in the Nevada System for Higher Education (NSHE).

Support full implementation of tobacco control and prevention provisions of the Patient Protection and Affordable Care Act (ACA) in Nevada, including coverage of cessation services in both public and private insurance plans.
Provide information to policy makers and the public in Nevada on the value of evidenced-based tobacco prevention and control measures and policy.

B. Promoting Healthy Lifestyles through Support of Nutritious Eating and Active Living in Nevada

Promote and support healthy lifestyle programs and policies in schools and child care settings, including efforts to improve access and opportunities for physical activity, increase consumption of nutritious meals and adherence to nutrition standards at school, and advance the movement towards requirements for quality physical education class time that meet national guidelines.

Promote and support community environments conducive to healthy eating and active living, including built environments that integrate physical activity into daily life, increase access to healthy foods, and eliminate food deserts.

Support comprehensive worksite health and wellness programs.

Support efforts to collect and report data on student health and wellness by school districts, including annual body-mass index data collection.

Support state and local efforts to monitor, address, and treat eating disorders.

Provide information to policy makers and the public in Nevada on the value of evidenced-based measures and policy that promote nutritious eating and active living.

C. Protecting and Promoting Maternal, Child, and Adolescent Health in Nevada

Support the implementation of evidence-based comprehensive sexual education and standards by school districts.

Advocate for the promotion and protection of reproductive rights and access to reproductive health services for all women.

Support state and local teen pregnancy prevention.

Advocate for evidence-based programs and policy to prevent sexually-transmitted diseases (STDs), including rapid HIV testing and prevention of STD risk behaviors.

Support the development and implementation of school-based health services, including preventive health services for students with behavioral health care needs.
Support early childhood preventative programs that strengthen families’ ability to promote the social and emotional development of their children.

Provide information to policy makers and the public in Nevada on the value of evidenced-based measures and policy to promote and protect maternal, child, and adolescent health.

**D. Improving Access to Clinical and Preventive Health Services in Nevada**

Support efforts to improve access to health care services, including programs and policies that expand health insurance coverage to uninsured populations, ensure safety net services to medically underserved populations, and adequate provider networks by all public and private health insurance plans.

Support the integration and reimbursement of comprehensive clinical and preventive services, including chronic disease management and lifestyle change.

Support the implementation and utilization of electronic health records to improve clinical quality and health outcomes, including clinical participation in the state’s health information exchange.

Support efforts to improve access to clinical and preventive services delivered through telehealth technology to medically underserved areas.

Advocate for improved access to mental health and behavioral health services, including the provision of intervention and stabilization services for youths in crisis.

Support the prevention of prescription-drug abuse and other substance abuse, including medication assisted treatment.

Promote improved access to oral health services and the percentage of Nevadans receiving fluoridated water.

Support syringe access efforts to reduce the injection-related transmission of HIV, viral hepatitis, and other blood-borne diseases.

Support the health care and public health workforce development in Nevada, including recognition, certification, and reimbursement of emerging health professions such as community health workers and community paramedics.

Provide information to policy makers and the public in Nevada on the value of health insurance coverage and access to quality clinical and preventive health services.
E. Supporting Evidence-based Injury and Violence Prevention in Nevada

Advocate for evidence-based injury prevention, including programs and policies to improve pedestrian safety and reduce transportation-related injuries and deaths, to prevent drownings and other recreational injuries, and to prevent drug overdoses and drug-related deaths.

Advocate for evidence-based violence prevention, including programs and policies to prevent firearm injuries and violence.

Support evidence-based occupational health and safety programs and policy.

Advocate for evidence-based suicide prevention.

Provide information to policy makers and the public in Nevada on the value of evidence-based injury and violence prevention.

F. Advocating for Enhanced Local, State, and Federal Investments in Public Health and Other Social Determinants of Health in Nevada

By recognizing the fundamental relationship between educational attainment and health outcomes, support increased investments in K-12 education and higher education in Nevada.

By recognizing the fundamental relationship between poverty and poorer health outcomes, support efforts to ensure a living wage and affordable housing for Nevada workers and families.

By recognizing the fundamental relationship between the built environment and health outcomes, advocate for community-design and transportation policies that support sustainable, active community environments resulting in the reduction of risk factors contributing to chronic disease.

Support tax reform efforts leading to a more equitable and reliable tax system to ensure adequate funding for essential public health services that transition Nevada’s health system from a sick-care system focused on treating individuals after they become ill to a prevention-oriented system focused on population health promotion and wellness.

Support local health districts and public health authorities in their efforts moving towards quality improvement through accreditation, by supporting public health staffs’ knowledge and competencies regarding accreditation and quality improvement, facilitating health departments’ utilization of health needs assessments and available health data, and participating in health improvement planning with health departments and public health system partners.

Provide information to policymakers and the public in Nevada on the health impact of adequately funding essential public health services, the value of public health accreditation, and the return on investments from evidence-based, population-health oriented programs and policy.
**Additional Information**

For more information about the Nevada Public Health Association (NPHA) and the work of the NPHA Advocacy and Policy Committee (APC), please visit [www.nphaonline.org](http://www.nphaonline.org) or contact NPHA APC Chair, Dr. John Packham at jpackham@medicine.nevada.edu or 775-784-1235.

NPHA is the state affiliate of the American Public Health Association and represents a wide range of public health professional disciplines and organizations, including local health departments, universities, local nonprofit organizations, state agencies, and individual public health professionals.

The mission of NPHA is to serve as the voice for public health in Nevada in order to improve and achieve equity in health status and a healthier Nevada. The vision of NPHA is a healthy Nevada.
